GIMP - Movie Poster Reflection

Creating your own movie poster using GIMP is a fun project.
GIMP is freeware that is very similar to Photoshop which you can
download and use on your home computer. With GIMP, you can do
basic photo editing plus many more cool advanced graphic designs.
The movie poster, "Zombie Teachers Attack" was created using four
different photos. The idea is a spoof on the recent zombie craze.

The zombies and apple-mouth were cut out using the **LASSO** tool. Once placed on the
background their **OPACITY** was reduced and the **SMUDGE** tool was used to blend them
together. The background Photo, a clock tower, was blended into the background by using the
ERASER tool and then the **OPACITY** was reduced.   Text was added with an **OUTLINE**
effect.   Then the **ERASER** tool was used with a **SPLATTER BRUSH** to give a distressed look
to the letters. Finally, a **BORDER** (frame) was added to the poster.
